EchoHub

A Multimedia Learning Platform Combining Podcasts and Interactive Design

Team Members: Nikhil • Bhumika • Maleeha • Ria • Jasmine

Project Overview

14-Week Journey

This project represents the culmination of 14 weeks of dedicated learning in our AI school club: AINOVA, where we explored multiple tools and techniques.

Unified Platform

We combined multiple AI tools and skills into one cohesive, functioning platform that brings educational content to life.

NotebookLM • Gamma • Codex

Engaging Learning

Our focus was on making educational content more engaging, accessible, and interactive for students of all levels.

Throughout this journey, we learned to integrate AI technologies with creative thinking and collaborative problem-solving. From initial concept to working prototype, each week built upon the last, teaching us valuable lessons in project management, technical implementation, and user-centered design.

Problem & Goal

The Challenge

Traditional learning methods can feel boring and passive, leaving students disengaged. Many educational experiences fail to capture attention or make subjects feel relevant to modern life.

Students need **interactive and engaging** ways to explore topics that spark curiosity and make learning feel like discovery rather than obligation.

Our Goal

Create a dynamic platform where users can explore short, engaging podcasts across diverse subjects—from technology and science to history and geography.

Transform passive listening into **active exploration**, making complex topics accessible and entertaining through audio storytelling.

Our Solution: The Website

EchoHub is a fully functional podcast platform designed with students in mind. It combines intuitive navigation with engaging content delivery, creating an immersive learning experience.

01

Browse by Category

Explore curated content organized into Technology, Science, Geography, and History sections

02

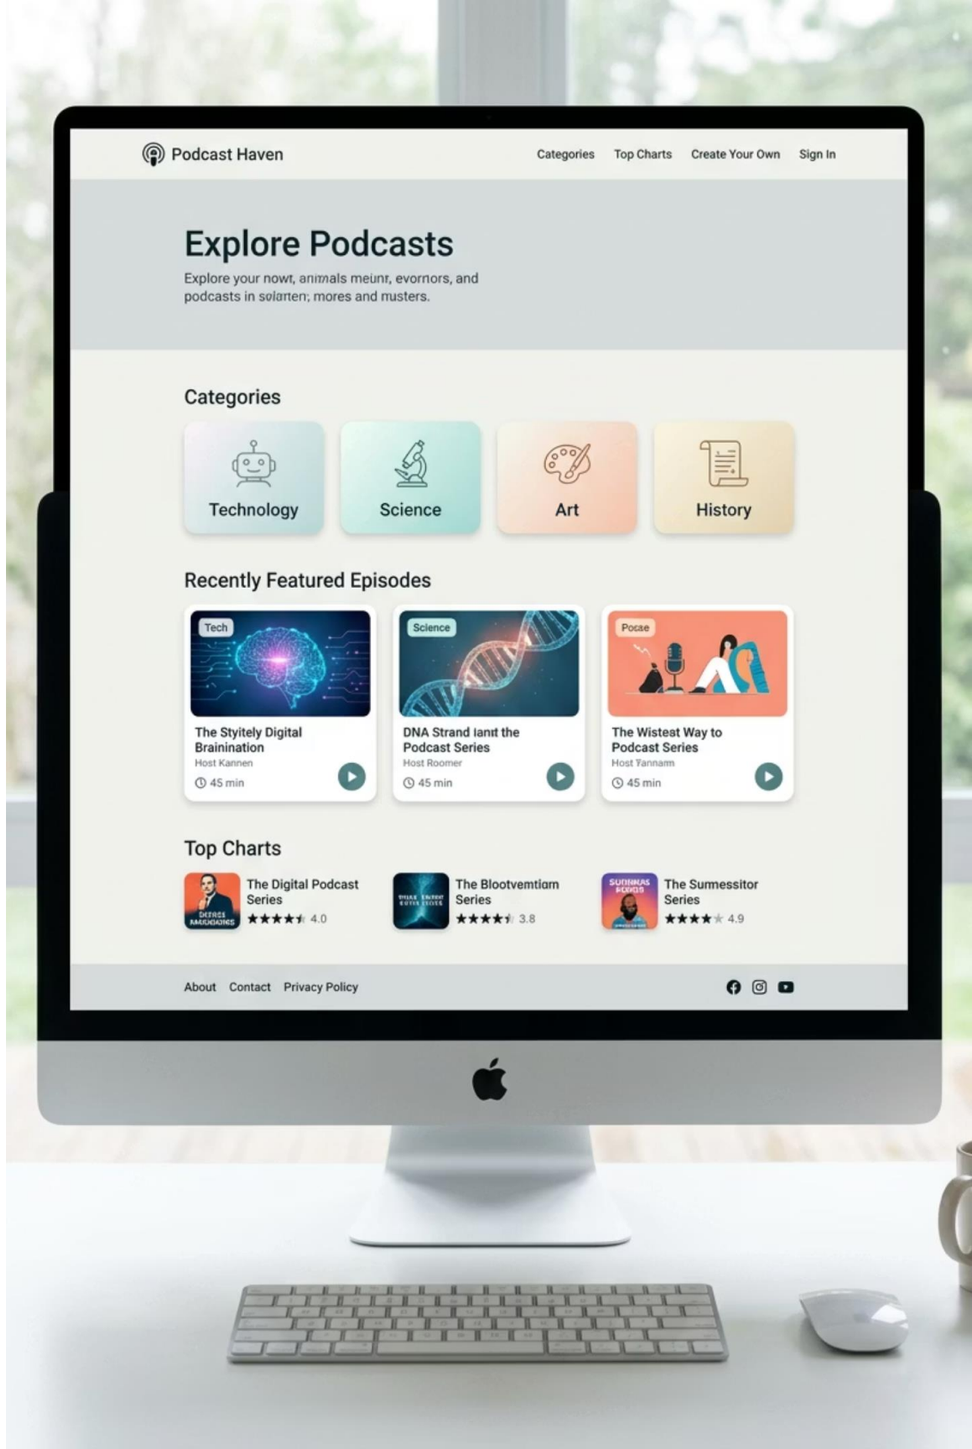
Play & Discover

Enjoy podcasts through our built-in mini player that works seamlessly across devices

03

Search & Explore

Find specific topics quickly using our intuitive search and navigation system



Key Features

Category-Based Navigation

Organized sections make it easy to find content that matches your interests and learning goals

Interactive Podcast Cards

Visual previews with episode information, durations, and engaging thumbnails for quick browsing

Episode Detail Popups

Expanded views with full descriptions, timestamps, and related content suggestions

Built-In Mini Audio Player

Never leave the page—play, pause, and control audio from anywhere on the platform

Dark Mode Support

Switch between light and dark themes for comfortable viewing in any lighting condition

Smart Content Tracking

Automatic favorites system and recently played list to pick up where you left off

Content Creation: Our Podcasts

12

Podcast Episodes

Total episodes covering diverse topics

3

Minutes Per Episode

Bite-sized learning sessions

4

Subject Categories

Technology, Science, Geography, History

Each podcast was carefully crafted to be short, clear, and engaging—perfect for students with limited time but big curiosity. Some key learnings include:

Why We Dream

Explore the science behind sleep and dreaming

Black Holes

Uncover the mysteries of space's most fascinating objects

Internet Data

Learn how information travels across the globe instantly

Taj Mahal

Discover the history and architecture of this iconic monument

World War I

Understand the causes and impact of the Great War

Team Contributions

This project was truly collaborative, with each team member bringing unique skills and perspectives to create something greater than any individual could accomplish alone.

1

Nikhil – Website Development

Designed and built the complete website interface and functionality, implementing responsive design principles and ensuring smooth user experience across all devices.

2

Bhumika – Podcast Creation

Created 6 podcast episodes, conducting research, recording audio, and editing content to ensure clarity and engagement

3

Maleeha – Podcast Creation

Created 6 podcast episodes, bringing diverse topics to life with clear explanations and engaging storytelling techniques.

4

Ria – Script Writing

Helped structure and refine podcast scripts, ensuring content was accurate, age-appropriate, and optimized for audio delivery.

5

Jasmine – Presentation Design

Designed and organized the presentation, creating visual mockups and ensuring consistent branding throughout the project.

Design & User Experience

Clean & Modern UI

Inspired by real-world apps with subtle gradients and thoughtful color choices

Smooth Navigation

Intuitive layout that guides users naturally through the content

Mobile-Friendly

Responsive design adapts to any screen size or device

Our design philosophy prioritized simplicity and usability above all else. We studied popular podcast and music streaming platforms, identifying what made them intuitive and enjoyable. The result is a clean, modern interface that feels familiar yet fresh, with visual consistency that builds trust and confidence in the platform.

Every design decision—from button placement to color selection—was made with the end user in mind, ensuring that students could focus on learning rather than figuring out how to use the platform.

Challenges & Learning

1

Integrating Components

Combining multiple technical components into one cohesive, working system required careful planning and coordination

2

Content Organization

Structuring content in a way that's logical and easy to navigate while maintaining visual appeal

3

Design Consistency

Maintaining consistent design language and user experience across all sections and features

4

AI Tool Integration

Learning how different AI tools and platforms can work together in a single project

These challenges taught us valuable lessons about project management, technical implementation, and the importance of clear communication within a team. We learned that setbacks are inevitable, but with persistence and collaboration, they become opportunities for growth and innovation.

Conclusion & Reflection

> "AI is most powerful when combined with human ideas and teamwork."

AI Enhances Creativity

This project demonstrates how AI tools can amplify human creativity rather than replace it, opening new possibilities for content creation and problem-solving

From Learning to Building

We moved beyond theoretical knowledge to create a tangible product that serves real users and solves actual problems

Teamwork Makes It Happen

Success came from combining diverse skills and perspectives, showing that the best projects emerge from collaboration

EchoHub represents more than just a school project—it's a testament to what's possible when students are given the tools, time, and support to explore their interests. We hope this platform inspires other students to combine technology with creativity, transforming learning from a passive experience into an exciting journey of discovery.
